

SATELLITE HUB

SATELLITE HUB

CENTRAL HUB

MINI HUB

REMOTE ATTENDEES

CENTRAL HUB

Anchoring the event, the Central Hub sets the scene for the wider audience.

An operated mix of camera feeds and content is streamed live to remote sites, allowing members to connect wherever they are located.

Local audiences are engaged by a dynamic mix of content and live video from the main and remote sites.

SATELLITE HUB

Attendees across Satellite Hub venues follow the same live feed as the Central Hub. A blend of video and content from Satellite Hubs are streamed back to the Central Hub in real time, allowing remote presenters to contribute to the entire conference from multiple sites.

Each Satellite Hub has the option to present autonomously to its local audience if required.

MINI HUB

Attendees unable to travel to the main event can gather at mini hubs. Located at smaller sites these locations utilise inhouse equipment where available or Multi-Media Systems could provide.

Hubs receive a link to the live stream and can be supported by a dedicated AV technician.

REMOTE ACCESS

Attendees who are unable to attend hubs can follow from the comfort of their own home or office.

They can view the live stream on a phone, laptop or tablet, it's as easy as clicking the link. A helpline with dedicated support is available if required.
